

## Ebola Virus Disease

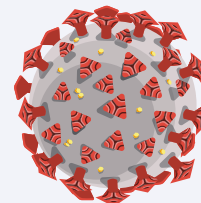

## COVID-19

**EVD** (commonly known as Ebola), is caused by viruses within the genus Ebolavirus. It's a rare but deadly disease that causes bleeding and organ failure.

### What is it?

**COVID-19**, caused by the respiratory coronavirus SARS-CoV-2 (COVID), is a disease characterized by various symptoms that can include fever and shortness of breath.

### How is it transmitted?

Primarily contact, or droplets in the form of bodily fluid

Primarily respiratory droplet, or contact

### What PPE is needed?

**Needed:** Gown or coveralls, waterproof apron, goggles and/or face shield (for eye protection), two pairs of gloves (including one long surgical glove), gum boots, surgical mask, hood or cap over head

**Optional:** Hair net, Boot covers

**Needed:** Gown, goggles or face shield (for eye protection), surgical mask, respirator (when dealing with aerosol-generating procedures (AGPs)), gloves

### What should you do with a suspected case?

Immediate isolation at health care facility (HCF)

Immediate isolation using risk-based approach: HCF for high-risk patients; home or community for mild cases

### How long is quarantine after an exposure?

Up to 21 days

Up to 14 days

## Ebola Virus Disease

## COVID-19

### Is sharps safety important?

YES! Always place sharps in sharps container after use.

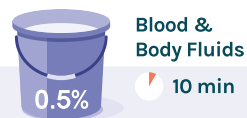

### How are surfaces disinfected?

**0.05%:** Use for soiled linen management only AFTER cleaning. Soak linen for 15-30 minutes. Also use for hands if ABHR or soap and water are not available.

**0.1%:** Use for routine surface cleaning.

**0.5%:** Use for blood or bodily fluids only AFTER cleaning.

### How are dead bodies managed?

No touching or cleansing of dead bodies

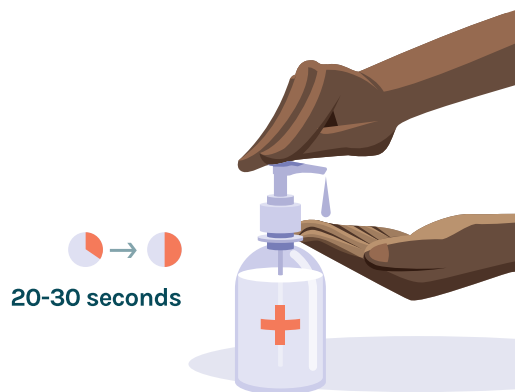

Handling of bodies using routine management processes

### How should routine hand hygiene be performed?

If hands are visibly soiled, wash with soap and water for 40-60 seconds.

If hands are not visibly soiled, use Alcohol-Based Handrub (ABHR) for 20-30 seconds.
